

## QSOS TODO list

Last update: 13/01/2013

## QSOS Backend

- Upload:
  - Reject incomplete evaluations (score, header) or not with not enough comments
  - Templates: differentiate additions from update and allow updates only by the same user

## XulEditor

- *Criteria* Tab: label *Comments* should be in bold font
- Backport Tim's reverse engineering of templates

## Documentation

- Meta: most of documentation should be in English, some of it in French also

- Method:
  - Update the text itself
  - Translate it in English
- Installation guide(s) of QSOS tools
  - XulEditor: document installation as a xulrunner application (`xulrunner -install-app /path/to/xuleditor/`) and ideally make `.exe`, `.rpm` and `.deb` packages
  - O3S
- QSOS Starting Guide
  - Merge with current wiki
  - Make a complete demo of the QSOS lifecycle
- QSOS Maintainer Guide
  - Impacts of a QSOS format modification (XSD, XSLT, tools)
  - Impacts of the Maturity axis of criteria (XML documents of reference: `criteria-maturity_*.xml`, XulEditor's external and internal XSLT, template bootstrapping, method itself)
  - How the project manages version; method, formats, documentation, templates, evaluations...
- QSOS translation and localization guide (only in English)
  - Translation of the method, XML files (`criteria-maturity_*.xml`, XSLT)
  - Translation of tools gui (O3S, XulEditor)
  - Add a new supported language in tools (O3S, XulEditor)
  - Documentation and website
  - Translate templates and evaluations (try to do some automation here? Google translate?)
- FAQ, Tips and Tricks, Best practices...
  - Common problems: template -> evaluation (errors, I have to **Maturity sections**, lost metadata...), Remote Save (XSD errors, encoding, credentials...)
  - Reuse best practice of current wiki regarding how to design a template
  - Clarify legal aspects: Are QSOS evaluation under FDL?, Are exported QSOS comparison under FDL?

## Website

- Change the structure: QSOS goals and specifics should appear on the first webpage
- Use Gitit (<https://github.com/jgm/gitit>) for the Wiki
- Develop a function in 03S to automatically update templates and evaluations lists
- Decide if WordPress MU is still usefull in the DrakkR project

## Recurring annoying pbs

- Git errors: <http://stackoverflow.com/questions/1918524/error-pushing-to-github-insufficient>
