

QSOS 2.0 Changelog

Last update: 13/01/2013

QSOS Formats

- XSD for QSOS format
- Freemind XSD for templates

QSOS backend

- QSOS backend is now split in two repositories:
 - *Incoming*: community sandbox opened to any registered user
 - *Master*: QSOS certified evaluations and templates
- Templates and evaluations can be uploaded to the backends, this requires authentication

XulEditor

- Remote Templates can be downloaded from the QSOS repositories and used to create a new evaluation

- Remote evaluations can be downloaded from the QSOS repositories and opened by the editor
- Evaluations can be send and saved in the remote QSOS repositories, this requires authentication
- Evaluations can be resynchronized with local or remote templates

03S

- 03S connects to a QSOS repository by configuration
- Better GUI internationalization, icluding evaluations filtering on language
- Evaluations can now be visualized in HTML and Freemind format
- Comparisons can now be visualized on a QSOS Quadrant and also be exported to OpenDocument formats (ODS, ODP and ODT)
